

CamHydra

Live trailer monitoring · by GREGAN

A device fitted by GREGAN inside the trailer, linked to a website: it watches the cargo throughout the journey, at rest areas, on the road and at the delivery site, and alerts you at once, **with photos as proof**.

What CamHydra watches

Intrusion 5 photos, analysed: person seen or not	Shock to the trailer	Detour more than 500 m off the planned route	Motorway exit anywhere but the planned exit
Silent device no news for more than 20 minutes	Network, GPS, battery losses and low battery	Temperature, humidity for sensitive goods	Delivery detector off only when the site is open

When an alarm goes off

- 1 The alarm appears on screen, with sound, on phones and in the team chat room.
- 2 An operator takes charge; every workstation sees who is on it.
- 3 They call the driver and, if needed, prepare the file for the police: map, address, the three nearest police stations, original photos.
- 4 They close it with the follow-up noted. Every action is kept for a year in the logbook.

Evidence ready to hand over

- **Evidence file** for an alarm: original photos and their fingerprints.
- **File for every mission**: dated timeline, GPS track, departure and arrival photos, incidents, summary.
- Printable **logbook** for every alarm.

For your teams

- Everyone sees only their own trucks and alarms, and handles their own.
- On computer and phone; two-factor authentication for every account.
- Linked to SPLT, the GREGAN freight exchange: armed at departure, estimated arrival time, photos.

Getting started

1. Choose the trailers to equip · 2. GREGAN installs the devices (on loan) · 3. First journeys monitored, together with you.
